DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 9, 14, and 15-20 are allowed.

Regarding claim 1, Chulajata discloses the apparatus Fig.1 for processing a communication received by at least two (2) antenna assemblies 101a and 101M, said communication being comprised of sequentially transmitted slots of equal length (Col.5 line 19-26), said apparatus comprising: a channel estimator (Col.6 line 8-17); first and second units coupled to the channel estimator for determining signal quality based on at least one of history, recent channel estimation and optimization.

The Linder reference however discloses a switching means responsive to the signal quality for selectively coupling slots from said antenna assemblies to a common input of said channel estimator wherein the slots from each antenna assembly are coupled to said common input in a uniform sequence responsive to a first quality output.

However, the prior art does not specifically disclose wherein there are two (2) antenna assemblies and switching in said non-uniform sequence comprises: forwarding at least two consecutive slots of one of said two antenna assemblies to said common input before forwarding a single slot from the other of said two antenna assemblies.

Claims 2 and 9 are dependent on allowable claim 1.

Regarding claim 14, Chulajata discloses the apparatus for processing a communication received by at least two (2) antenna assemblies 101a and 101M, said communication being comprised of sequentially transmitted slots of equal length, (Col.5 line 19-26),said apparatus comprising: a channel estimator (Col.6 line 8-17);

However the Chulajata reference does not specifically disclose the means for selectively coupling slots from said antenna assemblies to a common input of said channel estimator in a given pattern; first and second units coupled to said channel estimator for determining signal quality based on at least one of history, recent channel estimation and optimization.

The Linder reference however discloses an antenna selection circuit which determines the selection of the antenna based on antenna signal quality such as RSSI level of a particular antenna channel during the monitored time slots, based on the detected level monitored by the system, the switch control is than able to compare with other antenna performances to allow a selection to be made. (Abstract)

The prior art does not specifically disclose wherein there are two (2) antenna assemblies 101a and 101M, switching in said non-uniform sequence comprises: forwarding at least two consecutive slots of one of said two (2) antenna assemblies to said common input before forwarding a single slot from the other of said two (2) antenna assemblies.

Claim 15 is dependent on independent claim 14.

Regarding claim 16, Chulajata discloses the method for selectively coupling a communication received by at least two (2) antenna assemblies 101a and 101M to a channel estimator (Col.6 line 8-17); said communication being comprised of sequentially transmitted slots of equal length,(Col.5 line 19-26), comprising: said channel estimator (Col.6 line 8-17);

However Chulajata does not specifically disclose estimating channel response; and a switch: controlling the switching of the communication of said two (2) antenna assemblies responsive to said channel response.

The Linder reference however discloses an antenna selection circuit which determines the selection of the antenna based on antenna signal quality such as RSSI level of a particular antenna channel during the monitored time slots, based on the detected level monitored by the system, the switch control is than able to compare with other antenna performances to allow a selection to be made. (Abstract)

However the prior art does not continue to disclose switching in said non-uniform sequence comprises: forwarding at least two consecutive slots of one of said two (2) antenna assemblies to said common input before forwarding a single slot from the other of said two (2) antenna assemblies.

Claims 17-20 are dependent on allowable independent claim 16.
